# Surgical Gloves

By 2016, healthcare systems in Germany and the United Kingdom had eliminated their use of powdered gloves in sensitive surgical cases.<sup>[1]</sup>  
In March 2016, the FDA issued a proposal to ban their medical use as well.<sup>[2]</sup>

Powder is essential for gloves manufacturing process. To make the Gloves FREE from POWDER, Each glove has to go under more extensive washing process during manufacturing, Which also make the gloves free from allergens like 'free latex proteins'

## Premium Quality Microtextured Optimum Thickness

Many post operative complications are related to Gloves Powder  
Gloves powder includes Talcum Powder, Corn Starch, silicone and also includes some amount of dusting or donning powders, mold-release compounds, and manufacturing debris.  
These components are related to postoperative granuloma, scar formation and inflammatory reactions and granuloma and scar formation.<sup>[1]</sup>

Ultrafit Eligant® will take you into the powder-free era with an affordable cost ensuring the quality, safety and comfort
